# What is artificial intelligence?

[Gartner Glossary](#) > [Information Technology Glossary](#) > [Intelligence \(AI\)](#)

## Artificial Intelligence (AI)

Artificial intelligence (AI) applies advanced analysis and logic-based techniques, including machine learning, to interpret events, support and automate decisions, and take actions.

PROFESSIONAL EDUCATION

## What is Artificial Intelligence?

Artificial intelligence is the ability for computers to imitate cognitive human functions such as learning and problem-solving. Through AI, a computer system uses math and logic to simulate the reasoning that people use to learn from new information and make decisions.

## Artificial intelligence

[Article](#) [Talk](#)

[Read](#) [View source](#)

From Wikipedia, the free encyclopedia

*"AI" redirects here. For other uses, see [AI \(disambiguation\)](#), [Artificial intelligence \(disambiguation\)](#), and [Intelligent agent](#).*

**Artificial intelligence (AI)** is the intelligence of machines or software, as opposed to the intelligence of humans or animals. It is a field of study in computer science which develops and studies intelligent machines. Such machines may be called AIs.

# Generative AI: The Hype Is Real

## Primary Focus of Generative AI Initiatives

gartner.com

Gartner

- ▶ General-purpose technology
- ▶ Hype will lessen over time, as **the reality of implementation** sets in
- ▶ Impact will grow as people discover more innovative applications for the technology in their daily lives

# Predictive AI vs. Generative AI

	Predictive AI	Generative AI
What is it for?	Predicts or forecasts outcomes based on historical data	Generates new, original content
Been around for	Decades	Years
Adoption	50% (plateaued)	33% (rapidly growing)
Maturity	<p>The graph shows the maturity of Predictive AI over time. The y-axis is labeled 'VISIBILITY' and the x-axis is 'TIME'. The curve starts at 'Technology Trigger', rises to a 'Peak of Inflated Expectations', falls into a 'Trough of Disillusionment', rises through a 'Slope of Enlightenment', and finally levels off at a 'Plateau of Productivity'. A green arrow points down from the peak towards the plateau.</p>	<p>The graph shows the maturity of Generative AI over time. The y-axis is labeled 'VISIBILITY' and the x-axis is 'TIME'. The curve starts at 'Technology Trigger', rises to a 'Peak of Inflated Expectations', falls into a 'Trough of Disillusionment', rises through a 'Slope of Enlightenment', and finally levels off at a 'Plateau of Productivity'. A green arrow points down from the peak towards the plateau.</p>
Situation	Implemented broadly across industries	Exploring use cases to provide value and differentiation

# Why we need to get this right

## 4 Common AI Project Challenges:

- ▶ Lack of Governance
- ▶ Ballooning costs
- ▶ Unrealistic expectations
- ▶ Data issues

# The Road to AI Success

## Prioritise AI Use Cases

- ▶ Impact
- ▶ Risk
- ▶ Data

Where to now?

**OpenShift  
Operators**

OpenShift AI

OpenShift  
GitOps

OpenShift  
Pipelines

OpenShift  
ServiceMesh

OpenShift  
Serverless

Prometheus

**Red Hat OpenShift Service on AWS (ROSA)**

**OpenShift AI supports continuous development, integration,  
deployment and monitoring for AI/ML models**

# Bring your own model

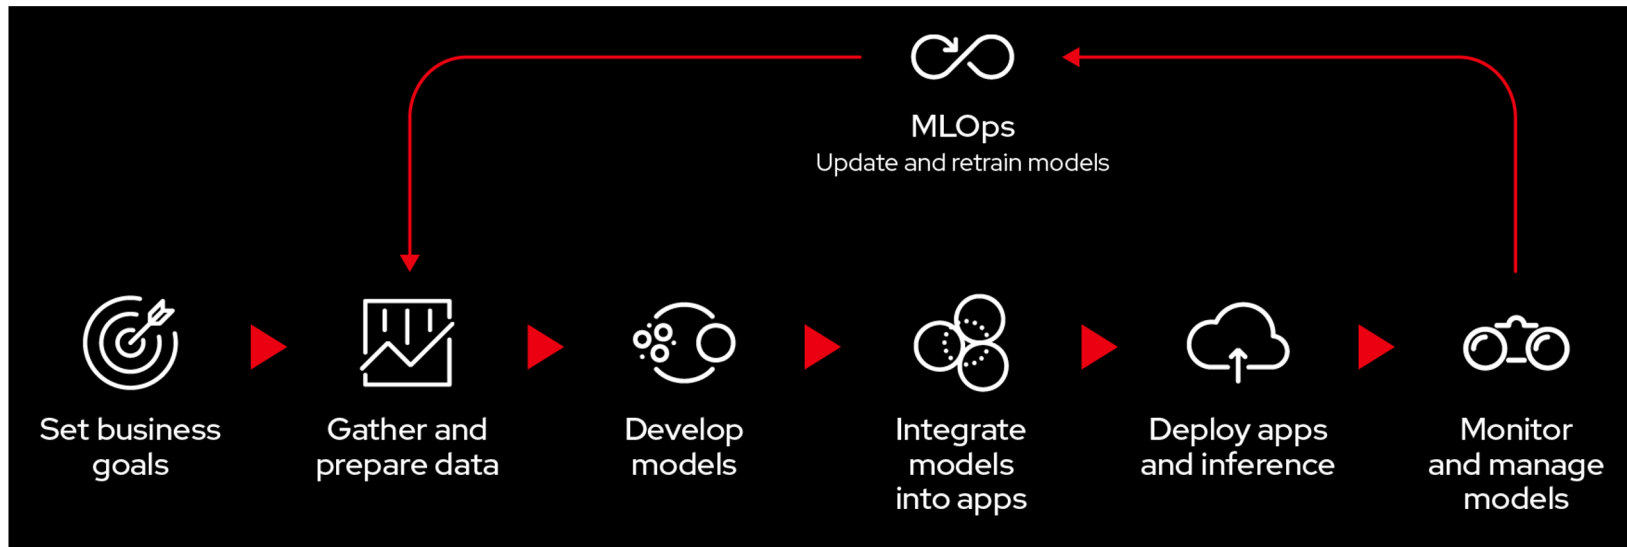

Best-of-breed AI technologies from a certified partner ecosystem

Red Hat provides the tools for  
**developing** predictive models or **tuning** foundation models.

We don't offer models, but partner with model builders and support the motion for '**bring your own model.**'

# This is MLOps

Machine learning operations starts with understanding the use case.

Retrieval-augmented generation (RAG).

# AI in 60 seconds \*

## Predictive

Predicts or forecasts outcomes based on historical data

You are  
(probably)  
here.

## Generative

Uses larger set of data and models to generate new, original content

You want  
to be  
here.

\* we all wish!

# Understanding foundational models for Generative AI

Where we are today

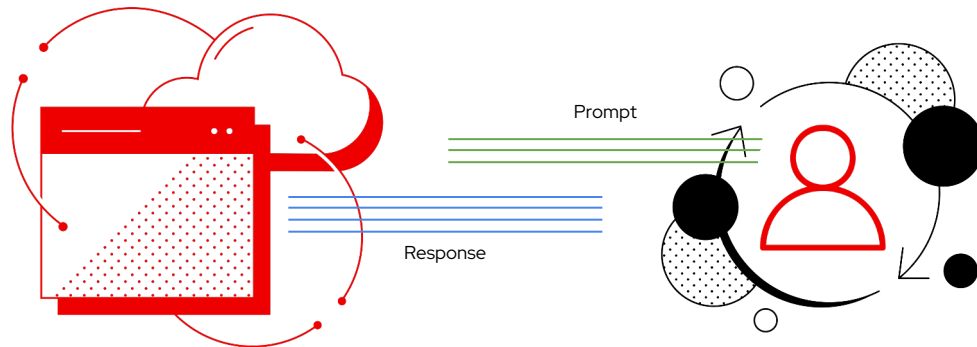

- ▶ **Prompt tuning:** Prepend prompt with data.
- ▶ **Retrieval augmented generation (RAG):** return facts from external sources.
- ▶ **Fine tuning:** Make small adjustments to the model data.
- ▶ **Training a foundation model from scratch:** can be a lot of work!

# What is retrieval-augmented generation (RAG)?

LLM Only

LLM

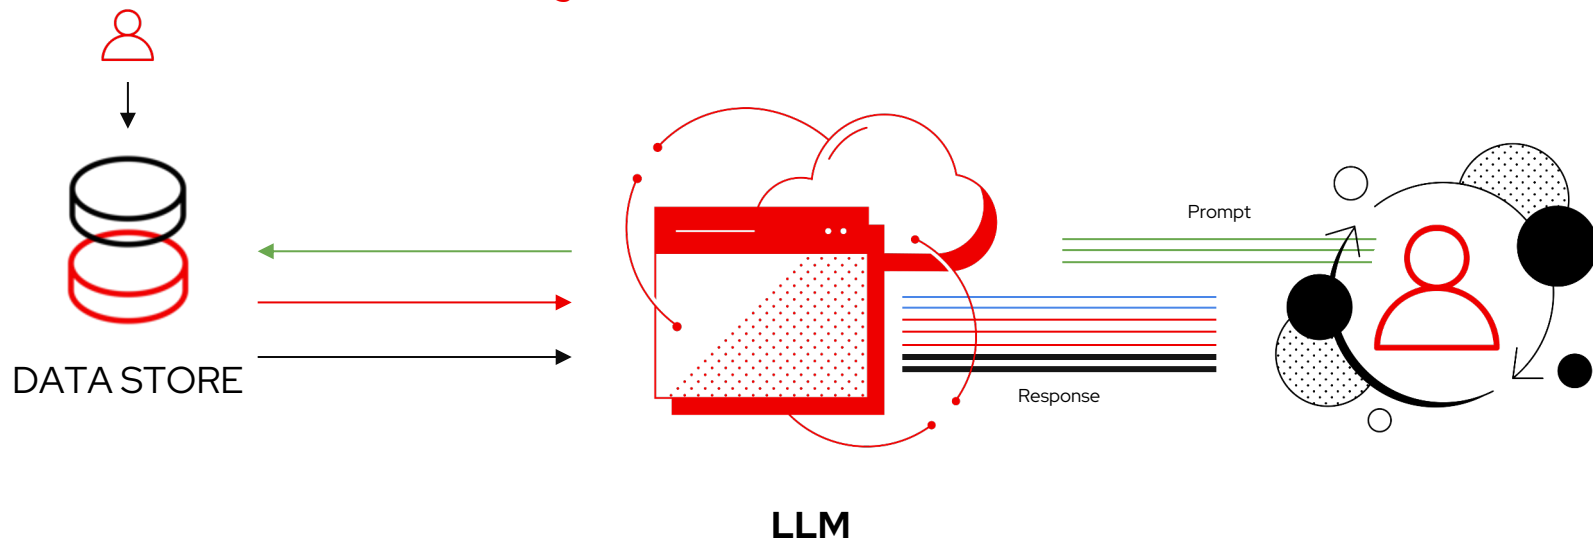

# What is retrieval-augmented generation (RAG)?

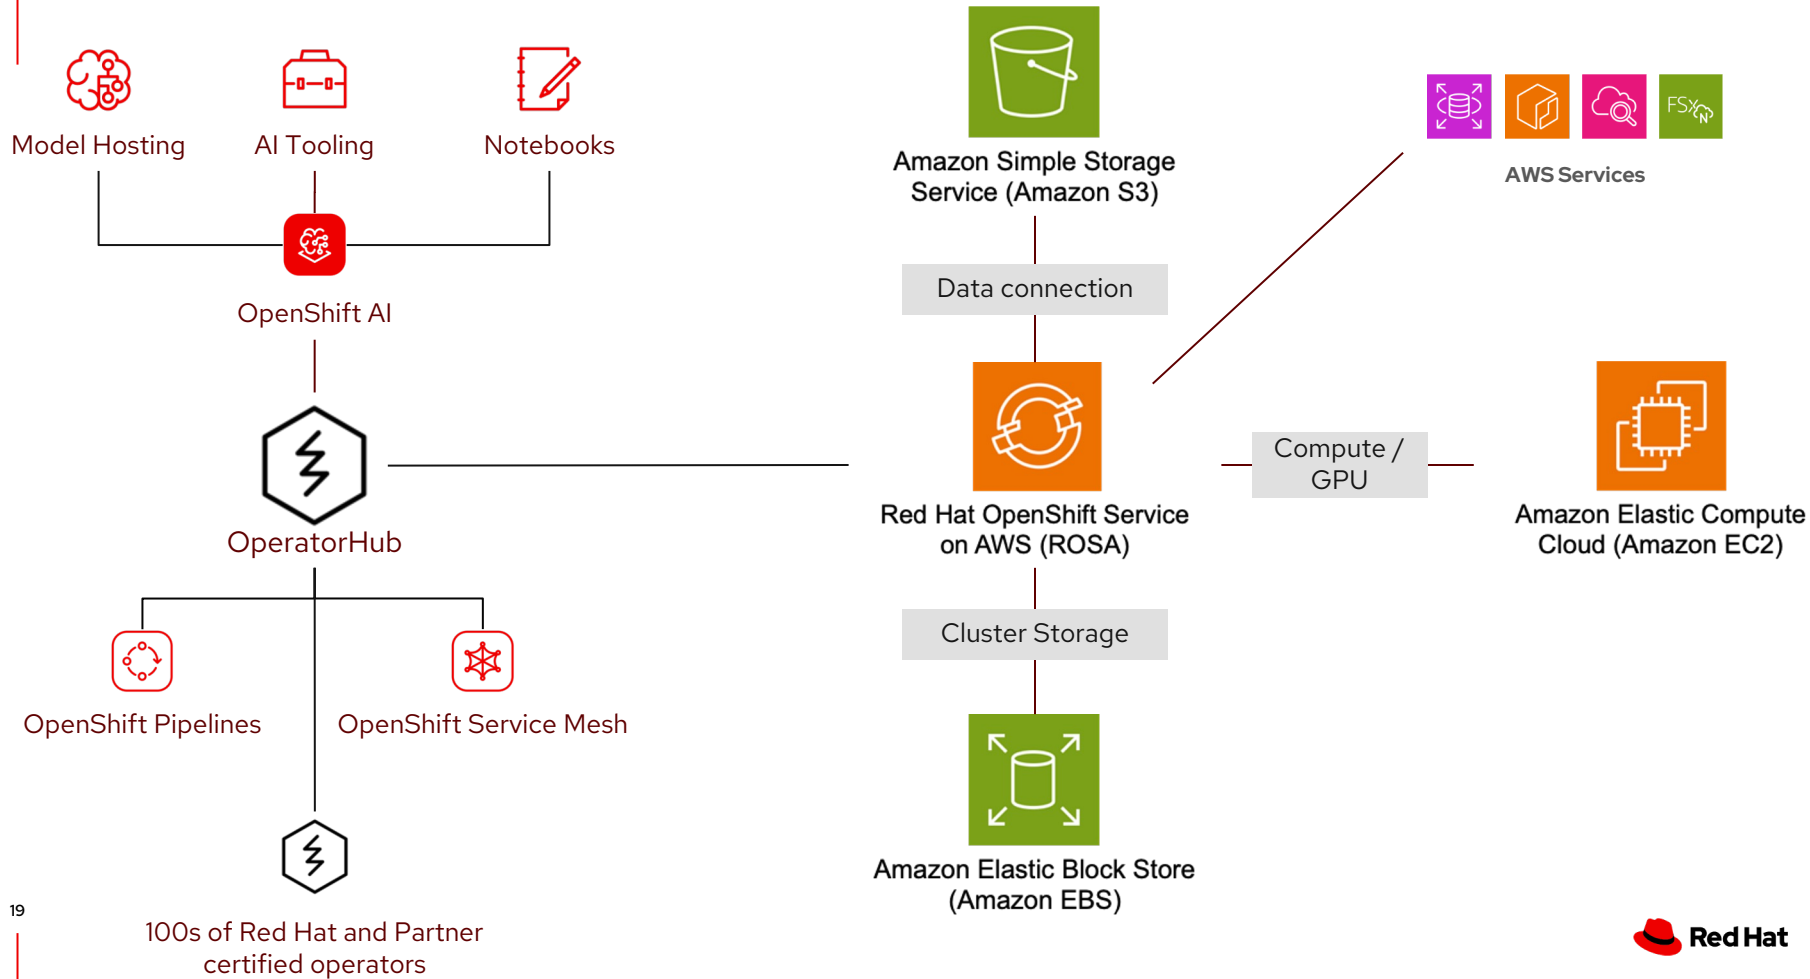

LLM + Data Store

# What is retrieval-augmented generation (RAG)?

Augment data store with new data

Let's see this in action!

**DEMO**

# The value of Red Hat OpenShift AI

A powerful platform for building AI/ML models and applications

## Simplify AI adoption

Promotes freedom of choice and access to latest innovation on AI/ML technologies

## Drive AI/ML operational consistency

Streamline the process of moving models from experiments to production

## Gain hybrid cloud flexibility

Deploy models in containerized format across on-prem, clouds and edge to comply with regulatory requirements

# Innovate while adding value

The entire development and deployment process is vastly simpler with Red Hat OpenShift. We can deliver new solutions to the business and our customers faster than ever.

**Charles Pizzato**

Executive General Manager, IT Infrastructure,  
Suncorp Group

*With Red Hat OpenShift Service on AWS, we have a service that is ready for the future. We don't have to worry about continuously improving the platform or managing the underlying infrastructure or operations, freeing our team to fully focus on providing greater innovation and value to our customers.*

ARWIN SCHOLTEN, CHIEF TECHNOLOGY OFFICER, EDSN

# Thank you

Red Hat is the world's leading provider of enterprise open source software solutions. Award-winning support, training, and consulting services make Red Hat a trusted adviser to the Fortune 500.
